ABSTRACT

As the economic growth of China, coupled with a large population, China has gradually formed a huge market and has attracted Taiwanese restaurant business to set up branches in China. To succeed in the Chinese market, we must fully understand the demand differences across the Strait under cultural and environmental differences, and provide localized services to meet customers’ perceived value and customer satisfaction in order to enhance customer purchase intentions. This study uses quantitative methods to carry out the analysis through the questionnaire survey. Based on the customers in cross-strait chain restaurants, this study explores whether there is any correlation among tested variables. Based on customers in Taiwan and Shanghai, this study adopts random sampling to have collected and analyzed 500 valid questionnaires. The findings reveal that the quality of service has a more positive impact on customer satisfaction than the perceived value in the service environment, and that this type of customers also has a higher purchase intention toward the chain restaurants.

Keywords: Service Quality, Perceived Value, Customer Satisfaction, Purchase Intentions

Table of Contents

Chinese summary ..................... i  English summary ..................... iii
Acknowledgements ..................... iv  Contents list ..................... v

Chapter 1  Introduction

1  First  Research background and motivation
2  Second  Research purpose
3  Third  Research process

Chapter 2  Literature Review

1  First  Service quality
2  Second  Perceived value
3  Third  Customer satisfaction
4  Fourth  Purchase intention
5  Fifth  Relationship among variables

Chapter 3  Research Method

1  First  Research framework
2  Second  Research hypotheses
3  Third  Operational definition and measurement
4  Fourth  Sample determination and sampling methods
5  Fifth  Data analysis methods

Chapter 4  Data Analysis Results

1  First  Descriptive statistics analysis
2  Second  Reliability analysis
3  Third  Validity analysis
4  Fourth  Independent sample T-test and one factor variance analysis
5  Fifth  Correlation analysis among variables
6  Sixth  Structural equation model construction and analysis
7  Seventh  Empirical results

Chapter 5  Conclusion and Recommendations

1  First  Research conclusions
2  Second  Research implications and recommendations
3  Third  Research limitations
4  Fourth  Suggestions for future research
