

# Design of vehicle bonnet structure for pedestrian safety

Van-Luc Ngo、鄧作樑

E-mail: 322124@mail.dyu.edu.tw

## ABSTRACT

I would like to express my acknowledgement to all people who helped me to finish my research works. I want to thank Da-Yeh University, Mechanical and Automation Engineering Department for giving me a chance to come to Taiwan to study and do my fruitful research works. I also want to thank Professor Tran Trung who is the rector of Hung-Yen University of Technology and Education for giving me permission to attend the PhD program in Da-Yeh University, Taiwan. Specially, I would like to express my deep appreciation to Professor Tso-Liang Teng who is my advisor for helping me very much when I applied scholarship as well as in my studying process in Da-Yeh University. He encouraged and gave me many suggestions during my research time and writing this dissertation. I would like to gratefully acknowledge to Professor Cho-Chung Liang, my advisor's friend who gave me advices and encouragement in doing research. I want to say thanks to my lovely wife who was parenting alone so I can perform my dream far from home. I also want to say thanks to my father and mother-in-law for their taking care of my wife and my daughter. My former graduate students, classmates, and latter graduate students from the Impact Dynamics Laboratory who supported me in my research work and give me a good study environment during three years when I stayed in my lab. I want to thank them for all their help, support, interest and valuable hints.

Keywords : Pedestrian, Headform impactor, Head injuries, Bonnet, Bonnet reinforcement, Optimal design.

## Table of Contents

ABSTRACT.....iv	中文摘要.....v
ACKNOWLEDGEMENTS.....vi	CONTENTS.....vii
LIST OF FIGURES.....ix	LIST OF TABLES.....xii
Chapter I. INTRODUCTION.....13	1.1 Motivation.....13
Analyzing Method of Pedestrian Head to Bonnet Top Tests.....16	1.2 Literature Survey.....18
1.3 Solutions for Pedestrian Protection.....18	1.3.2 Bonnet Structure Design for Pedestrian Protection.....19
1.4 Research Objectives and Scope.....22	1.5 Research Framework and Process.....23
Chapter II. HEADFORM TO BONNET TESTS.....35	2.1 Introduction of Pedestrian Headform Impactor to Bonnet Top Tests.....36
2.1.1 Purpose of Tests.....36	2.1.2 Head Injury Criterion.....36
2.1.3 Pedestrian Headform Impactors.....37	2.1.4 Certification Tests of Headform Impactors.....38
2.1.5 Testing Procedure.....38	2.2 Simulation of Pedestrian Headform Impactor to Bonnet Top Tests.....39
2.2.1 Finite Element Model of Passenger Car.....39	2.2.2 Finite Element Model of Headform Impactors.....40
2.2.4 Simulation of Headform to Bonnet Top Tests.....41	CHAP3 III. ANALYSIS OF PEDESTRIAN FRIENDLY BONNET DESIGN.....47
3.1 Calculation of HIC value.....47	3.2 Simulation of Headform Impactor to Bonnet Top Tests.....49
3.3 Dynamics Analysis of Impact Process between Headform and Bonnet.....49	3.4 Processing of Output Data.....51
3.5 Results and Discussions.....53	3.5.1 Effect of Normal and Tangential Accelerations on the HIC value.....53
3.5.2 Analysis of Normal Acceleration Variation.....55	3.5.3 Analysis of Curvature of Head Center Motion Variation.....57
3.6 Problem of Pedestrian Head Friendly Reinforcement Structure Design.....60	Chapter IV. OPTIMAL DESIGN OF BONNET THICKNESSES.....71
4.1 Assessing of the Pedestrian Friendliness of Original Bonnet.....71	4.2 The Effect of Bonnet Thickness on HIC value and Deflection.....72
4.3 Optimizing Bonnet Thickness with Respect to Pedestrian Head Safety.....74	4.3.1 Design of Optimal Function.....75
4.3.2 Design of Constraints.....76	4.3.3 Results and Discussion.....77
Chapter V. PEDESTRIAN FRIENDLY BONNET STRUCTURE DESIGN.....86	5.1 Bonnet Reinforcement Structure Design.....86
5.2 Design of Bonnet Thicknesses for Pedestrian Head Safety.....88	5.2.1 Design of Optimal Function.....88
5.2.2 Design of Constraints.....89	5.3 Results and Discussions.....90
Chapter VI.	

CONCLUSIONS AND FURTHER RESEARCH WORKS.....	99 6.1
Conclusions.....	99 6.2 Recommendation for Future Research Works.....
REFERENCES.....	102
