ABSTRACT

In this paper, we apply ANFIS (Adaptive Neuro-Fuzzy Inference Systems) to the modeling of a forecasting system for the Taiwan Stock Market. Fundamentally, ANFIS is about taking a fuzzy inference system (FIS) and tuning it with a backpropagation algorithm based on some collection of input output data. This allows your systems to learn. The consequences of the precision of prediction, adaptive network-based fuzzy inference system leads to the highest accuracy, compared to neural network ranks the second, and Multiple Regression is the lowest among the three. Keywords:fuzzy theory, time series, Adaptive Neuro-Fuzzy Inference Systems(ANFIS)

Keywords : fuzzy theory ; time series ; Adaptive Neuro-Fuzzy Inference Systems(ANFIS)
