E-mail: 9806193@mail.dyu.edu.tw

ABSTRACT

The purpose of the study: (1) Ballroom dance amateurs' with different backgrounds variate in serious leisure traits, enduring involvement, and flow experience as variables. (2) To understand the relationship between serious leisure traits, enduring involvement, and flow experience. The survey was using purposive sampling, 500 self-administered questionnaires were distributed, resulted in the 462 effective respondents and effective return rate was 92.4 percent. And one-way ANOVA, Pearson's product-moment correlation and stepwise multiple regression were adopted for data analysis. The results are as follows: 1. There were significant differences in serious leisure traits with different background-sex and month income. 2. There weren't significant differences in enduring involvement with different background. 3. There were significant differences in flow experience with different background-sex, age and occupation. 4. There was a significant positive correlations between serious leisure traits and enduring involvement. Among them, the 「Career」 and 「Attraction」 factors have the high correlation, the rest ones have moderate correlation. 5. There was a significant positive correlations between serious leisure traits and flow experience. and the correlation degree is low to moderate. 6. There was a significant positive correlations between enduring involvement and flow experience. and the correlative degree is low to moderate.

Keywords : ballroom dance , serious leisure , enduring involvement , flow experience
