ABSTRACT

This study is aimed at investigating the relationship among the brand equity of online shopping, delivery services and consumers' purchasing decisions. Hoping this study can help online shopping businesses provide appropriate delivery services to consumers with various socio-economic statuses and purchasing decisions. Online survey was the research method used in this study. There were 463 valid samples obtained by stratified sampling. Data were analyzed by descriptive statistics, factor analysis, t-test, one-way ANOVA and correlation analysis. The results are as follows: 1. Consumers' awareness of the brand equity is affected by the varieties of genders, age, educational level, monthly income and monthly net purchases. 2. Consumers' choices of delivery services are affected by the varieties of genders, age, educational level, monthly income, monthly net purchase and the number of hours shopping online weekly. 3. Consumers' purchasing decisions are affected by the varieties of genders, age, educational level, monthly income, monthly net purchase and the number of hours shopping online weekly. 4. The brand equity and the delivery services are both related to consumers' purchasing decisions. 5. The brand equity of the "perceived quality and brand association" is related to delivery services.

Keywords : brand equity, delivery service, consumer buying decision-making behavior
